TailorSmooth System Update Guide

V1.4 – 2024-05-15 by Septirage

This document provides instructions for updating the TailorSmooth System (TSS) on your server. It is intended for users who have already installed a previous version of TSS, to guide them through the process of transitioning to the latest version.

From Before 1.4

XML

Delete the previous ones, they are no longer needed:

- sept_craft_esthetique.xml

- sept_manage_craft_esth.xml

If you have chosen to use the "all hip in one", don't forget to patch your contextmenu.xml.

Scripts

Delete those:

- gui_sept_craft_esth_manage.NSS

- gui_sept_craft_esthe.NSS

- sept_include_craft_esthetique.NSS

- sept_include_text.NSS

- sept_launch_craft_esth.NSS

- sept_lib_appearance.NSS

- sept_translate_tts.NSS

Don't forget

- Update AspectManager plugin

- The mannequin blueprint (creacraftm.UTC) has also been changed too. Don't forgot to update the script call on your instances of it to sept_tss_launch.NSS

- The new launcher script is 'sept_tss_launch.NSS', replacing the old launcher script 'sept_launch_craft_esth.NSS'.

- The new main script is 'gui_sept_tss.NSS', replacing the old main script 'gui_sept_craft_esthe.NSS'.
- Be sure to update any and all references to these scripts in your system
